

LUTHER KING CAPITAL MANAGEMENT
LKCM SMALL CAP CORE COMPOSITE
Third Quarter, 2018 Update

<u>Performance **</u>	<u>3rd QTR 2018</u>	<u>YTD 2018</u>	<u>1 Year</u>	<u>3 Year Annualized</u>	<u>10 Years Annualized</u>	<u>Since Inception Annualized*</u>
LKCM Small Cap Core Composite (gross)	8.18%	19.94%	24.92%	15.83%	11.57%	11.83%
LKCM Small Cap Core Composite (net)	8.01%	19.21%	23.97%	14.95%	10.71%	11.01%
Russell 2000 Index	3.58%	11.51%	15.24%	17.12%	11.11%	9.67%

Small companies, as measured by the Russell 2000, gained 3.6% in 3Q18. It was another strong quarter for the benchmark. A stronger economy and lower taxes drove a positive 2nd quarter earnings season which resulted in an August all-time high for the benchmark. In addition, given its domestic focus, the Russell 2000 was mostly shielded from tariff / trade war concerns.

The stock market continues to benefit from above average U.S. economic growth and with the Index of Leading Indicators remaining positive, this should bode well for future profit growth. Consumer and business sentiment remains positive and capital investment is increasing. The Federal Reserve continues to take advantage of the stronger economy to “normalize” interest rates after years of an overly accommodative policy. They are steadily raising the Fed Funds rate to avoid unwanted inflation from creeping into the economy and we expect another increase in 2018.

Companies continue to use their profits and cash flow to reinvest back into their businesses, buy back stock, increase dividends, and remain active in mergers and acquisitions, all which are supportive of the market. We continue to be positive on the markets and, although valuations are higher than normal, the market is following earnings higher and continues to climb that proverbial “wall of worry.” Of course, potential trade wars and the upcoming political election cycle may result in increased volatility over the next few months.

For the benchmark in 3Q18, the positive return was led by the Technology and Health Care sectors. These two sectors are also by far the best performing sectors on a year-to-date basis (another leading sector this year was the Telecom Services sector but it’s weighting, before the recent reclassification, was less than 1%). Energy was the weakest sector but Consumer Staples and Real Estate were also negative in 3Q18. (All sectors are positive year-to-date). During the quarter, Growth stocks outperformed Value stocks and with the higher interest rate environment, it wasn’t a surprise to see the companies with lower financial leverage outperform. Rising interest rates has also dampened the “reach for yield” dynamic as companies not paying dividends significantly outperformed the dividend payers. Other attributes that outperformed were the larger market cap companies, higher return on equity and higher sales growth companies.

The LKCM Small Cap Core Composite outperformed during 3Q18 and is ahead of the benchmark on a year-to-date basis. In 3Q18, we benefited from positive stock selection and sector allocation decisions. Our stock selection contribution was significant relative to the benchmark and was especially positive in the Health Care, Technology, and the Consumer Discretionary sectors. Our sector allocation decisions were also positive as we were underweight the underperforming Real Estate sector and overweight the outperforming Technology sector. Given our focus on well-capitalized, higher return, quality companies, we were pleased with our performance. On a year-to-date basis, both our stock selection and sector allocations were additive to our results. The strategy continues to be positioned for continued economic growth (overweight Technology and Industrials sectors) and higher interest rates (underweight Real Estate and Utilities).

Our investment strategy is to maximize our internal, research-intensive process and to identify competitively advantaged companies that generate strong financial returns with good reinvestment opportunities and purchase these stocks at attractive prices. We believe this strategy of investing in higher quality, competitively advantaged companies with viable strategies to increase the value of their businesses will continue to be beneficial for our investors. Our goal is to generate superior returns over time relative to our benchmark by consistently executing our strategy and to minimize the risk (volatility) of the portfolio with a focus on achieving long term capital appreciation.

NA – Information is not statistically meaningful due to an insufficient number of portfolios in the composite for the entire year and/or the period is a partial year and/or the information was not required.

Luther King Capital Management (LKCM) is a registered investment adviser under the Investment Advisers Act of 1940 and is defined as an independent investment management firm. LKCM claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. LKCM has been independently verified for the periods January 1, 1992 through December 31, 2017. Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS® standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS® standards. The Small Cap Core Composite has been examined for the periods October 1, 1994 to December 31, 2017. The verification and performance examination reports are available upon request.

The Small Cap Core Composite contains all fully discretionary taxable and non-taxable, fee-paying small cap accounts under management, including applicable registered investment companies for which LKCM serves as investment adviser or subadviser. Our small-cap strategy seeks to achieve long-term capital appreciation and investment returns that exceed the applicable benchmark while attempting to manage portfolio risk and volatility. Our small-cap strategy seeks to achieve its investment objective through fundamental analysis of individual companies and seeks high quality companies based on various criteria, such as profitability levels, balance sheet quality, competitive advantages, market share positions, ability to generate excess cash flows, meaningful management ownership stakes, reinvestment opportunities, and relative valuation. The strategy typically purchases securities of companies with market capitalizations between \$600 million and \$5 billion at the initial time of purchase. For comparison purposes, the composite is measured against the Russell 2000 Index, which is a market capitalization weighted index that tracks the performance of 2000 small U.S. traded stocks.

January 1, 2003 is the effective creation date of the Small Cap Core Composite. Quarterly performance from October 1, 1994 to September 30, 2018 is available upon request. The annual standard deviation presented is an asset-weighted calculation of performance dispersion for accounts in the composite the entire year. The Small Cap Core Composite included portfolio(s) that paid a bundled fee, which includes all charges for trading costs, portfolio management, custody, and other administrative fees. The year-end percent of composite assets is as follows: 2007, 0.49%; 2008, 0.41%. Gross returns for bundled fee portfolio(s) are presented as supplemental information as they do not reflect the deduction of any trading costs, fees, or expenses. Net returns for bundled fee portfolio(s) reflect the deduction of all charges for trading costs, portfolio management, custody, and other administrative fees. The current management fee schedule for this composite is as follows: 1% on the first \$5,000,000; .75 of 1% on the next \$5,000,000; .50 of 1% above \$10,000,000; minimum annual fee \$30,000. Fees for registered investment companies for which LKCM serves as adviser or subadviser are calculated and paid quarterly in arrears, at annualized rates up to 0.75% of such fund's average daily net assets. In some instances, LKCM voluntarily waives these fees and/or reimburses the applicable fund in order to maintain a designated expense ratio. LKCM may adjust or otherwise negotiate management fees in its discretion and, therefore, clients may have a different fee schedule. For a complete list of our management fees, please see our Form ADV, Part 2A.

Policies for valuing portfolios, calculating performance, and preparing compliant presentations are available upon request. Effective January 2010, this composite is to stay over 80% invested in stocks at all times. Effective January 1, 2005, new accounts are added quarterly when the account is at least 75% invested and fully representative of investment style. Prior to January 1, 2005, accounts were added soon after inception on a quarterly basis and/or when considered fully representative of investment style. A complete list and description of the firm's composites is available upon request. Results are presented before taxes, both gross of management fees (which is net of commissions and other transaction costs) and net of actual management fees, and includes the reinvestment of all income. The U.S. dollar is the currency used to express performance. Past performance is not indicative of future results.

GLOSSARY OF TERMS

Alpha represents the excess return of the composite over the expected market return.

Beta measures the risk or volatility of the composite relative to the market as a whole.

R² measures the correlation of composite returns to the benchmark.

Up Capture measures the percentage of benchmark performance captured by the composite during up quarters.

Down Capture measures the percentage of benchmark performance captured by the composite during down quarters.

Growth investing is an investment style and investment strategy that is focused on the growth of an investor's capital. Those who follow the growth investing style - growth investors - typically invest in growth stocks or companies whose earnings are expected to grow at an above-average rate compared to its industry or the overall market.

Value investing is an investment strategy where stocks are selected that trade for less than their intrinsic values. Value investors actively seek stocks they believe the market has undervalued. Investors who use this strategy believe the market overreacts to good and bad news, resulting in stock price movements that do not correspond with a company's long-term fundamentals, giving an opportunity to profit when the price is deflated.
